HOSPITAL COURSE: Patient presented to ED via ambulance in the early morning of 05/04 with vomiting, Kussmaul respirations, glucose 487 mg/dL, pH 7.13. Admitted to PICU for IV insulin and fluid protocol; transitioned to floor 05/05; discharged home 05/06 in stable condition on adjusted basal-bolus regimen. Mother (Renata Sikorski) present at bedside throughout admission and completed diabetes re-education with CDE prior to discharge.

FOLLOW-UP: Endocrinology clinic visit scheduled 05/11/2026, 10:30 AM, parent to accompany patient. School clearance letter provided.

ENDOCRINOLOGY CLINIC NOTE (excerpt)

05/11/2026

Patient: Zofia Sikorski, accompanied by mother. Post-DKA follow-up. Glucose logs reviewed; overnight basal adjusted. Mother reports she has notified her employer of each absence related to the admission and this visit by calling the facility's charge-nurse line prior to shift start. Return to clinic in 4 weeks.
